**Abstract.** 54 genera and 132 species of orchids are recorded for the Bau Limestone Area. This represents about 15% of the orchids of Sarawak.

Key Words: Borneo, limestone, Orchidaceae, orchids

Meekiong, K. (2004) Orchids. *In: Sarawak Bau Limestone Biodiversity* (eds H.S. Yong, F.S.P. Ng and E.E.L. Yen). *The Sarawak Museum Journal* Vol. LIX, No. 80 (New Series); Special Issue No. 6: 147-161.

#### INTRODUCTION

The orchids were collected along the trails to the summits in 10-15 m strips on both sides and randomly in the hill areas during preliminary surveys. All the herbarium specimens and spirit collections are kept at the Sarawak Biodiversity Centre (SBC), and living specimens are grown at the SBC Nursery. Identifications were made at the Forest Research Centre, Kuching and by matching with photos in the reference books. The books were: Orchids of Borneo Vol. 1, 2 & 3; A to Z of South East Asian Orchid Species; The Orchids of Peninsular Malaysia and Singapore; Orchids of Sarawak; and The Plants of Mount Kinabalu: Orchids.

### RESULTS AND DISCUSSION

This project recorded 54 genera and 132 species of orchids in the Bau Limestone Area. This is 15% of the total number of orchids in Sarawak and 12% of the orchids found in Borneo. *Bulbophyllum* and *Dendrobium* are the two genera with the most species: 17 and 15 species respectively. Twenty-nine genera were represented by single species, eight genera by two species, seven genera by three species; four genera by four species and five genera by more than five species. Details are shown as Table 1.

Thirty-four species were recorded from Gunung Ropih. This is followed by Gunung Lanyang and Gunung Tabai with 25 and 20 species each. Of the 132 species, about 54% were epiphytes, 26% terrestrial, 1% lithophytes and 0.7% climbers. Most of the epiphytes were in the genen *Bulbophyllum* and *Dendrobium*. The terrestrials were well represented by *Liparis* and *Paphiopedilum*. Vanilla havilandii was the only climbing species.

The book, "Orchids of Sarawak" records 60 genera and 144 species of orchids from the Bau area. Our project added eight genera as new records for the Bau area: Acriopsis, Calanthe, Chelonistele, Chroniochilus Epipogium, Kingidium, Nervilia and Taeniophyllum. However, out of 60 genera previously recorded, 15 were not found during the survey. Aphyllorchis, Arachnis, Ascidieria, Claderia, Dipodium, Epigeneium Galeola, Geesinkorchis, Hippephyllum, Licanorchis, Peristylus, Phreatia Poaephyllum, Sarcoglyphis and Tania.
